Project Name	MedSafe AI - AI-driven medical safety assistant
Maximum Marks	2 Marks

Problem-Solution fit canvas 2.0

Purpose / Vision

Define CS, fit into

1. CUSTOMER SEGMENT(S) CS

•Who is your customer?Elderly patients managing multiple medications.
•**Secondary segment:** Caregivers or family members who oversee a loved one's health.

6. CUSTOMER CONSTRAINTS CC

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices

Constraints: Poor eyesight, lack of medical knowledge, or limited access to immediate professional advice late at night.

5. AVAILABLE SOLUTIONS AS

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

Alternatives: Searching Google (which can be overwhelming), calling a busy pharmacist, or using a physical pill organizer without safety checks.

Explore AS,

Focus on J&P, tap into BE, understand

2. JOBS-TO-BE-DONE / PROBLEMS J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

•**Problem:** Difficulty reading small, complex text on prescription bottles.
•**Job:** Ensuring different medicines don't cause dangerous side effects when taken together.

9. PROBLEM ROOT CAUSE RC

What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations

The "Why": Medical information is traditionally written in jargon-heavy language that is inaccessible to the average person..

7. BEHAVIOUR BE

What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

What they do: Patients often ask family members for help or just "guess" if a medicine is safe to take.

Focus on J&P, tap into BE, understand

Identify strong TR & EM

3. TRIGGERS TR

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more effi..cient solution in the news.

What triggers the action? Getting a new prescription from a doctor or feeling an unexpected symptom after taking a pill.

4. EMOTIONS: BEFORE / AFTER EM

How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control -use it in your communication strategy & design.
Before: Anxious, confused, and fearful of making a medical mistake.
After: Confident, informed, and in control of their health journey.

10. YOUR SOLUTION SL

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality.
If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

The Fit: An easy-to-use Streamlit dashboard that uses **OCR** to read prescriptions, **Fuzzy Matching** to identify meds, and an **AI Risk Engine** to provide clear, non-diagnostic safety guidance.

8. CHANNELS of BEHAVIOUR CH

1. ONLINE
What kind of actions do customers take online? Extract online channels from #7

Online: Searching health forums or using basic pharmacy apps.

8.2 OFFLINE
What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.
Offline: Reading the paper leaflets provided with medication (which are often discarded).

Extract online & offline CH of BE
